"KING" COTTON DETHRONED AND SWEET POTATO CROWNED "QUEEN"

—By—

W. L. WALSH, in Coffee County Vocational Farm & Home News

While Hitler was marching through Poland and France and on toward London, two hundred West Coffee County farmers marched on the throne of "King" Cotton and crowned Sweet Potato "Queen."

More than 700,000 improved copper skin sweet potato plants were purchased cooperatively and set out this past spring and summer by some two hundred farmers of the Basin, Brooklyn, Curtis, Mt. Zion, Pine Level and Zion Chapel communities in the Elba area of West Coffee County in cooperation with a sweet potato improvement project sponsored by the vocational evening classes in these communities.

When sweet potato planting time came most of the farmers found that the severe freeze earlier in the spring had frozen many of the sweet potato banks and that it would be necessary to secure new plants. It was also discovered that most of the old potatoes were diseased and of a mixed variety and were hard to keep over winter, anyway, so a move got underway to secure disease-free potatoes of the best variety available for this section. The improved Louisiana copper skin variety was selected and each class member agreed to take from one thousand to ten thousands of the plants for the purpose of getting new seed for many years.

To the surprise of many, several of the farmers were eating sweet potatoes the last of July and early August which were raised from the new plants set out around the middle of April. The early sweet potato market was investigated and a demand found for this new variety of potatoes. A few farmers began to dig and some of the early sweet potatoes on the early market were sold within two weeks time a large number joined in and sold from 25 bushels each from the one or two thousand plants which they had set out on from one-half to one-acre of ground. Only a part of each patch was sold which left a good supply for home use and seed purposes for another season.

Some Examples Cited

The following remark was frequently heard among the farmers during the early fall: "I wish I had not planted a hill of cotton and put out just one acre of sweet potatoes instead." That was because many of them had sold from \$10.00 to \$50.00 worth of potatoes off of just a small patch of less than one-fourth acre. A price of from \$1.20 to \$2.00 per bushel was received for several weeks during the early season.

A good example of what can be done with sweet potatoes in a general farm program was demonstrated by R. C. Grantham, who set out one acre of sweet potatoes and sold on the early market \$210.00 worth of potatoes and had plenty left for seed. Mr. Grantham cleared better than \$160.00 on this acre of potatoes and states that he made more on this one acre than he made on his 13 acres of cotton and 9 acres of peanuts combined.

Fred Mescham, C. Meek, F. E. Meek, J. A. Paul, Jim Paul, C. C. Gautney, G. H. Messick, S. O. Parker, C. J. Free, I. Free, Roy Barlow, W. T. Moore, J. J. McKinney, J. C. Redmon, W. W. Kite, O. Mount, D. D. Rodgers, J. C. Donaldson, Mrs. Bama Donaldson, John Taylor and many others cooperated in helping to supply trucks loaded for the early market.

Triple "F" Crop

The sweet potato is now being referred to in these several communities as the triple-purpose or triple "F" crop. In this day of Government alphabetical organizations we can think of the sweet potato as the F, F, F. crop. F- feed, F- food, F- funds.

We are told by feeding experts that the sweet potato is one of the best and cheapest feeds for most all kinds of livestock that can be raised on South Alabama farms. Hogs, cattle, and mules all like sweet potatoes. The sweet potato can be grown very economically—it is not uncommon to produce from 200 to 300 bushels per acre in the many land sections of South Alabama, and more than 400 bushels per acre have been reported on some of the better soils of this section.

For human food—the sweet potato finds a welcome place twelve months in the year. New fresh potatoes in the fall, stored potatoes in winter, spring and summer and delicious canned potatoes at any season of the year are available to the industrious farmer who grows them or others who may care to buy sweet potatoes as mentioned above.

Last but not least, that word "funds" finds a warm spot with most of us for it is just another word for cash. For those who care to grow some surplus sweet potatoes above the amount needed for feed and food, there is usually a ready market for them, especially if the potatoes are good and of a variety desired by the public. The examples cited earlier in this article illustrate what may be done toward exchanging potatoes for cash.

Early Hot Beds Planned

One or two members in each of the above mentioned evening school centers are making plans to install a flat-heated hot bed for the purpose of bedding and selling early sweet potato plants to the rest of the community early next spring so they may be ready for the early potato market in July and August. A few seed patches in the various communities have been inspected by a state inspector for diseases and only disease-free seed will be used in growing out these early plants. In this way these members will be able to produce State Certified seed and plants for sale.
